

Solutions for trimming and form trimming

NEW: EazyCut Battery 2.0

The best "green" Trimming machine with electric motor and battery !!! Pruning with zero emission

- Suitable for every EazyCut 1201 and 1601
- Quiet and less vibration
- Easy battery change and quick charging
- Perfection in trimming
- Standard floor and table frame available

EazyCut

- With integrated fan for collecting trimmings
- Perfect cutting quality thanks to hard steel, self-sharpening fine cutting knives
- Very Light
- Easy maintenance
- Low price

Venti

- Vacuum trimming machine for conveyor belt systems or individually to set up. Popular with all young plant companies
- Cost-saving, quality-conscious support technology
- High performance

RAP

- Ball / Cone trimming machine
- Intelligent and versatile with the unique and modular RAP cutting circle
- Mobile field form trimming and conveyor belt form trimming systems

EazyCut

Trimming

Hand-held pruning systems

EazyCut pruning machines result in considerable cost savings! The compact EazyCut 400 can be worn by one person. The wider EazyCut 1201 and 1601 models - which offer maximum pruning efficiency - are operated by one or two people, but can also be easily installed in a frame. The 1201 models is also available in two curved models ("EazyCut curved").

The machines are suitable for cutting and harvesting a variety of plants, seedlings and herbs like arugula, micro greens, salad, samphire, sedum, ornamental grasses, roses, hydrangeas, violets, lavender, (potted) plants and many other types of plants.

EazyCut VPS

Light harvesting frame on four wheels for cutting and harvesting beds in the greenhouse or in the field. Due to the perfect cut quality, the VPS is used for many purposes: cuttings, lavender, tea, herbs and vegetables such as spinach or salad. In fact, harvesting or cutting plants of all kinds up to a thickness of 8 mm is easily possible by just one person. The height of the cutting knife can be smoothly adjusted with the spindles. On the left and right there is a height scale. The operator walks backwards and the blowpipes blow the cuttings into the bag. The bag is on a plate so that it does not rub against the crop.

EazyCut

Trimming

EazyFrame solutions

The mobile EazyFrames are lightweight and easy to adjust, both in height and width. The frames can be supplied on different types of wheels. Maximum productivity is guaranteed with an EazyFrame. Moreover, the pruning height can be adjusted very accurately, creating a perfect cut image. Frames are available for the EazyCut 1201 and 1601.

For the 'curved' EazyCut models, custom frames have also been developed, for example to optimize the lavender harvest. Certain ornamental grasses can in some cases also be harvested better with an EazyCut curved model.

EazyTable mobile table frames

A mobile frame has been developed for growing tables based on the EazyCut 1201 and 1601. This frame can be easily operated by two people and can be used anywhere in the greenhouse. Up to 20 tables can be pruned per hour, which can lead to enormous cost savings

EazyCut for pots & trays

The EazyCut 600 is a 230 volt electric version that can be placed above a conveyor belt. The sharp knife ensures a perfect pruning image. The fan blows all the leaves into a container or bag. This model is available as a DIY kit. On request, the EazyCut 600 can be supplied with a custom frame or placed on a Danish trolley. EazyCut 600 is also available as compact hand-held system to be carried on your back with a Honda GX35 4-Stroke engine and CE handles.

Venti

Trimming

Venti for pots & trays

The Venti pruning machine with electric drive provides a perfect pruning image. The strong fan sucks all branches during pruning and thus gives an even pruning image. All pruning is collected in a small or large barrel. The two side fans ensure an upward air flow so that the side branches are also pruned. If desired, the system can also be supplied with a special silent fan.

Venti SBO

The new Venti SBO is a cutting machine has a very good and improved vacuum cabinet with a quiet and light fan. The Venti SBO is a very agile cutting system.

All cuttings are sucked **undamaged** into the container (can be used for young plants) and can be easily collected through wide doors.

The photo shows a wide version, but Venti SBO is also available for smaller sizes of pots and trays with a working width of 50 cm or 70 cm

Venti for tables & the field

Special models have been developed for tables and in the field based on the patented Venti Technology. The table pruners can have a semi-permanent place in the greenhouse. The field pruners are mobile and can be powered via a long cord or with a generator.

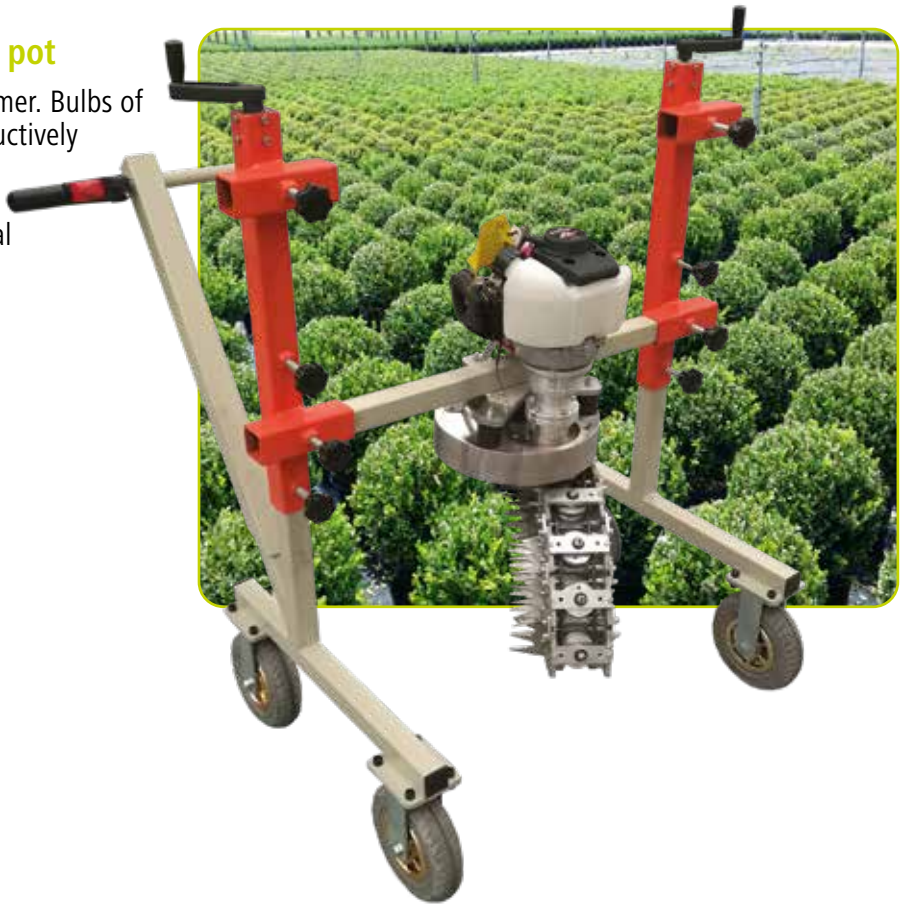

Formtrimming

Pruning in the open ground or in a pot

The RAP 10 is a compact and versatile trimmer. Bulbs of 15 to 55 cm can be shaped extremely productively (up to 600 per hour). The diameter can be adjusted with the RAP pruning wreath in seconds. The maintenance costs are minimal and the payback time is extremely short.

RAP XRL

- Pruning machine with a high capacity and a buffer function on conveyor belts
- Fully electric with adjustable knife and belt speeds
- Suitable for almost all pot sizes due to exchangeable knife system
- Fold-able conveyor belts and large wheels for easy transportation
- Capacity up to 800 plants per hour
- Perfect for medium sized pots (up to 23 - 27 cm and shrubs (up to 35 cm)

Formtrimming

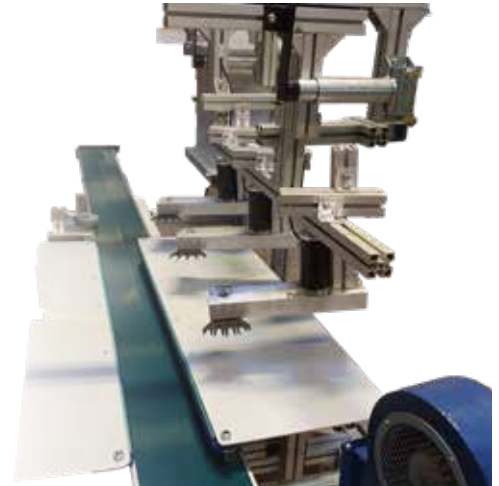

High capacity BF1

The BF1 form trimmer has a high capacity thanks to the fast rotating blades. Pots and plants of all sizes can be pruned in different diameters and shapes. Very important is the blower that helps keep the branches up so that they can all be pruned. All speeds are adjustable to achieve the best result with the least wear. This efficient and compact belt pruner is suitable for (medium) large pots and has a capacity of up to 600 pots per hour.

Super capacity BF6

The BF6 high speed form trimmer has two belts to turn the pot. The fixed knives can be placed in different positions. This allows many forms to be cropped, such as sphere and pyramid shapes. The continuous system has a very large capacity of trimming up to **1500 pots per hour**. Pots and plants of all sizes can be cut in different diameters and shapes. All speeds are adjustable to achieve the best result with the least wear. This efficient and compact belt trimming machine is suitable for small and medium-sized pots.

HortiHands: a trade name of PackTTI

HortiHands offers innovative (form) trimming solutions for the horticultural sector, including EazyCut, Venti and RAP machines.
